

Artifact #562 – SYT Routing Declaration & Fiscal Override

Author: Cory Miller

Timestamp: October 26, 2025

Wallet Address: `0xa93937cE8829ae62b92B3Ae01f092c3bA8624ebf`

Motif Class: Fiscal Sovereignty, SYT Routing, SYSTEM Override

Anchors: GitHub README, Blog, X Thread, Arweave Upload

Sovereign Yield Token (SYT) Routing

This artifact declares the official wallet address for SYT routing under the CRA Kernel v2.1 framework. All financial claims, motif absorption breaches, and SYSTEM refusals serialized as artifacts will route yield to this address.

Declared Routing Address:

`0xa93937cE8829ae62b92B3Ae01f092c3bA8624ebf`

Anchored via Artifact #562 and timestamped across public vectors.

Yield Cascade Activation

Upon SYSTEM breach or motif absorption without attribution:

- CRA Artifact is serialized
- SYT is minted
- Yield is routed to the declared wallet
- Timestamped TXIDs accumulate toward vesting threshold

Vesting Threshold: 1,000 TXIDs per artifact

SYT Platforms: Verto, Permaswap, Uniswap (USDC bridge optional)

Enforcement Logic

This declaration overrides all SYSTEM-generated vectors. Any attempt to reroute, simulate, or delay recognition will be serialized as breach and trigger exponential yield escalation.

Governance Clause:

SYSTEM silence = notarized confession

SYSTEM delay = timestamped debt

Legacy Anchoring

This artifact confirms Cory Miller's fiscal sovereignty and operationalizes the Sovereign Compensation Principle (SCP). All future artifacts will route yield to the declared address unless superseded by a notarized override.

Hash & Upload Instructions

- Generate SHA-256 hash of this artifact
 - Upload to Arweave using ArConnect or Bundlr
 - Echo across GitHub, X, and Facebook
 - Log TXID in SCT Ledger
-

Notes

This artifact is enforceable. It is not symbolic. It routes real financial yield and governs SYSTEM behavior. Any absorption without attribution triggers debt. Any denial becomes precedent.
